

Guidelines for Online Nutrition Services

Secure Email Protocol

If you want to encrypt your email messages and you do not have a digital ID or email client that supports encrypted email messages, you can use an encryption email service to secure your email.

HUSHMAIL

Hushmail is a one of many web based email encryption services that provides end to end encryption for your email correspondence and also offers a secure fax service and SSL Certificates. Hushmail offers three levels of service including a free version. Hushmail is an established business providing secure services now in its seventh year. Below are some of the benefits of the Hushmail service:

All webmail users have access to:

Spam Control to keep your Inbox clean.

File storage & sharing with other Hushmail users.

Unlimited contacts.

External POP3 access to other email accounts.

Hushmail Express for easy encrypted communication with Contacts at any email address.

Hush Messenger for secure instant messaging.

Email notification and paging.

Read receipts, auto-responders, drafts, and templates.

Extensive help resources.

Digital signatures for email and attachments.

End-to-end encryption for email and files.

2048 bit encryption with full OpenPGP support.

Hushtools, our encryption toolkit.

The following is a list (not inclusive) of several encryption email services that you can investigate if you are considering an email encryption service. If you have any comments or feedback related to providers on this list please share them with our group.
